

# JAVA 1

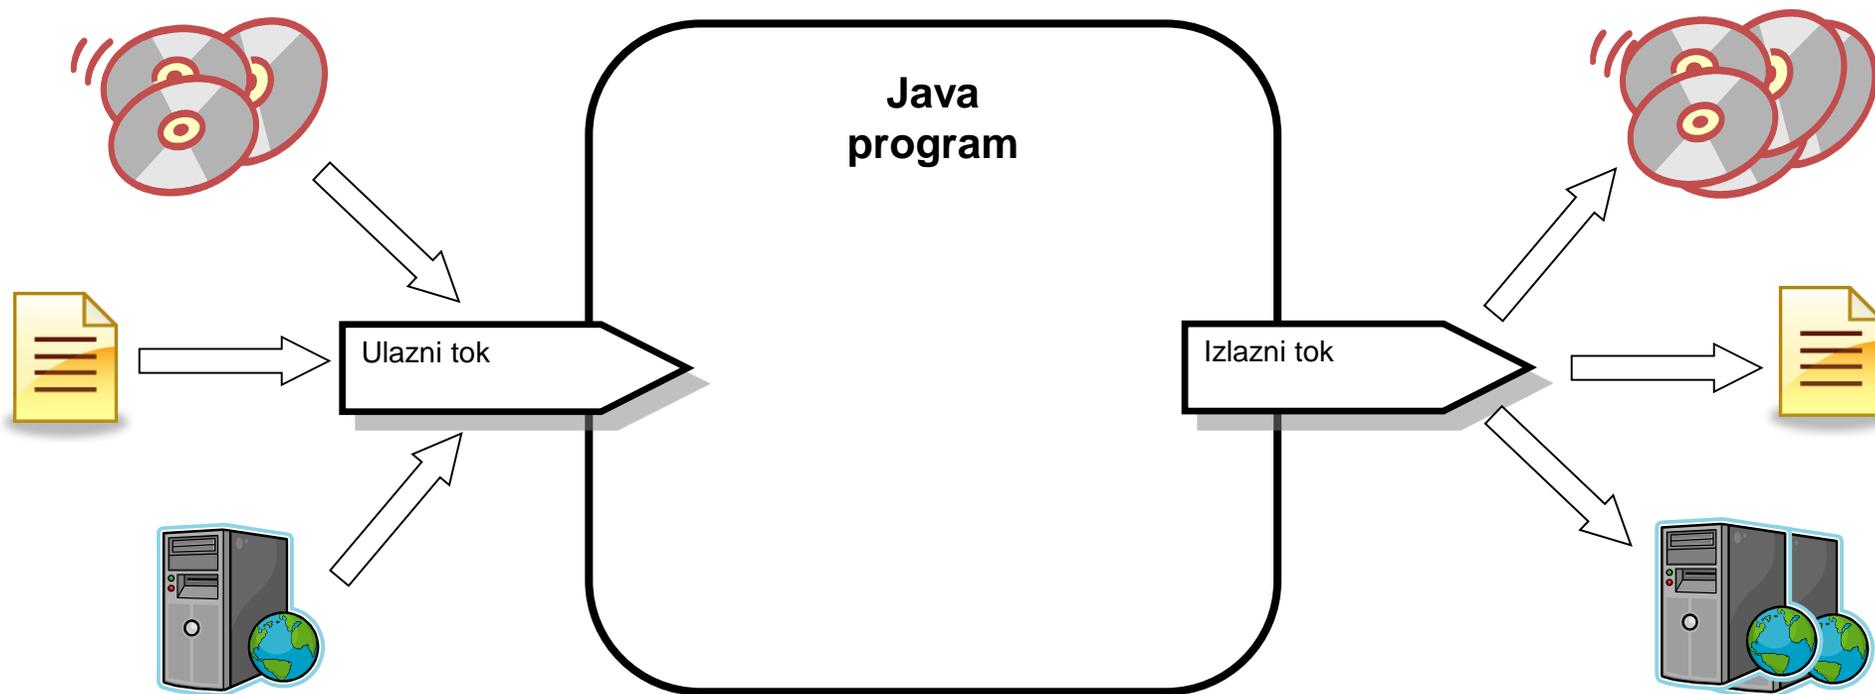

Java IO, NIO

# Teme

- Tokovi
- *java.io*
- Binarni i znakovni tokovi
- *Buffers* (međuspremnici)
- Serijalizacija i deserijalizacija
- *java.nio*

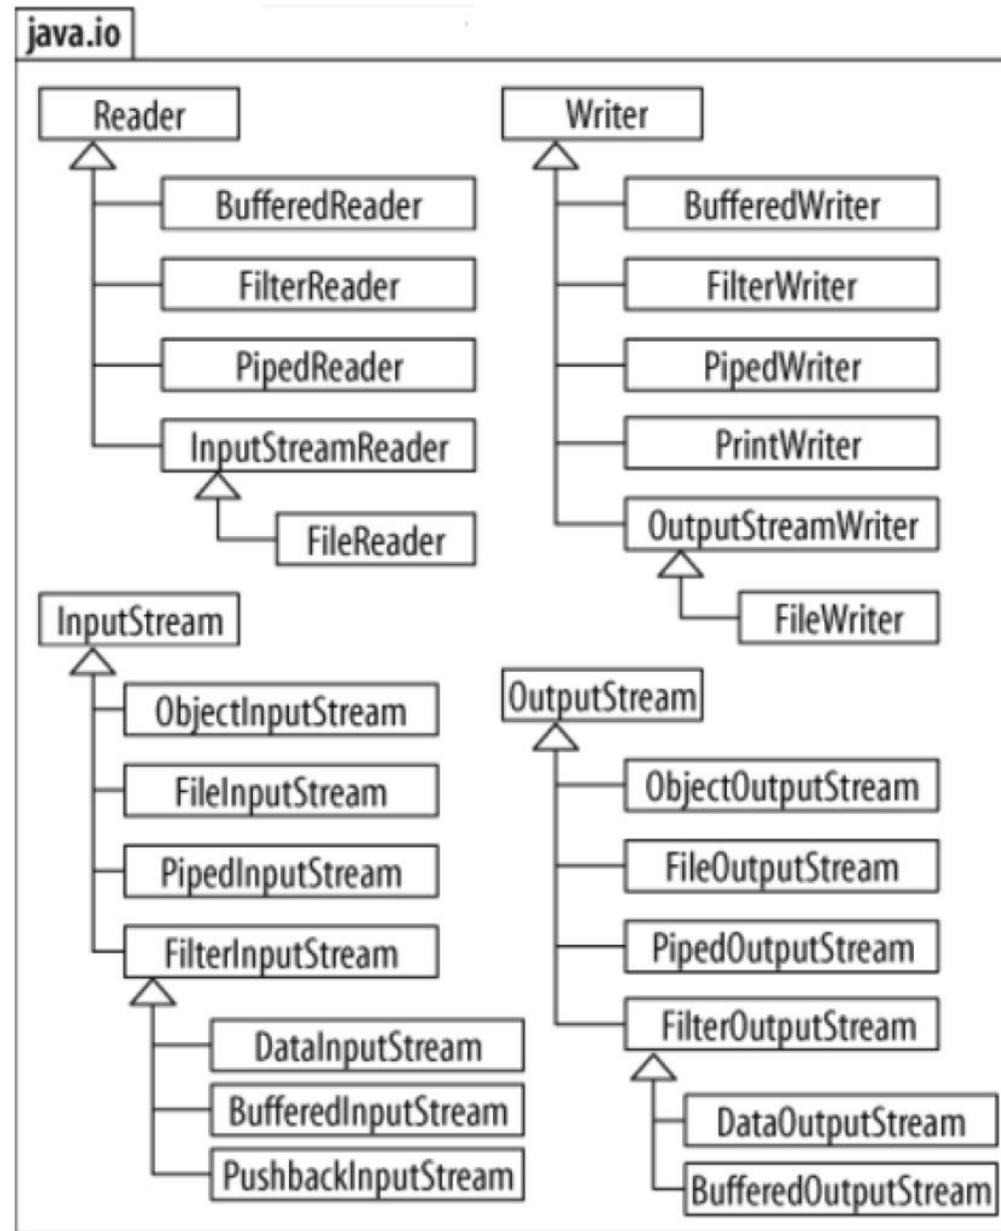

# Tokovi

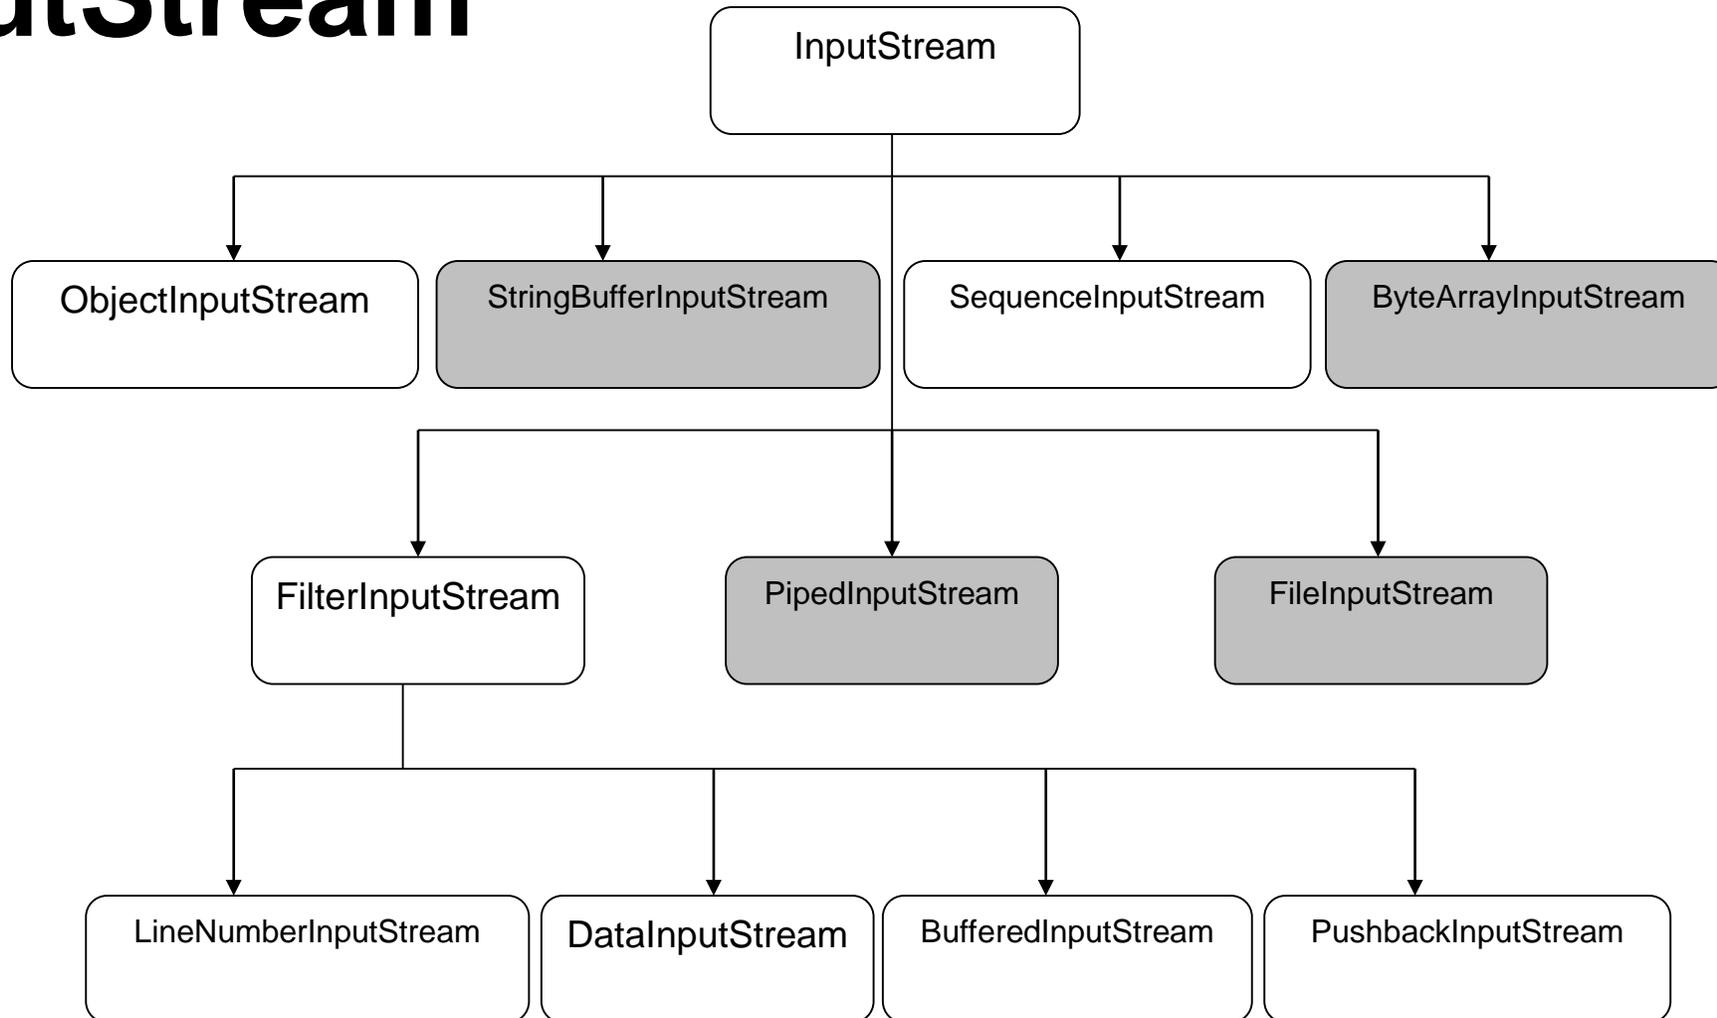

# Tokovi

- Java sve podatke tretira kao tokove – *stream of bytes*
- jednaki način čitanja/pisanja konzole, datoteka, internet resursa...
- EOF – svaka datoteka ima specijalan znak
- binarni tokovi – *io* predstavljen bajtovima(char 2B, double 8B...)
- znakovni tokovi – *io* predstavljen znakovima(char 2B)
- Standardni tokovi - *System.in, System.out, System.err*
- serializacija i deserijalizacija objekata
- *java.io.File* – razne *utility metode*

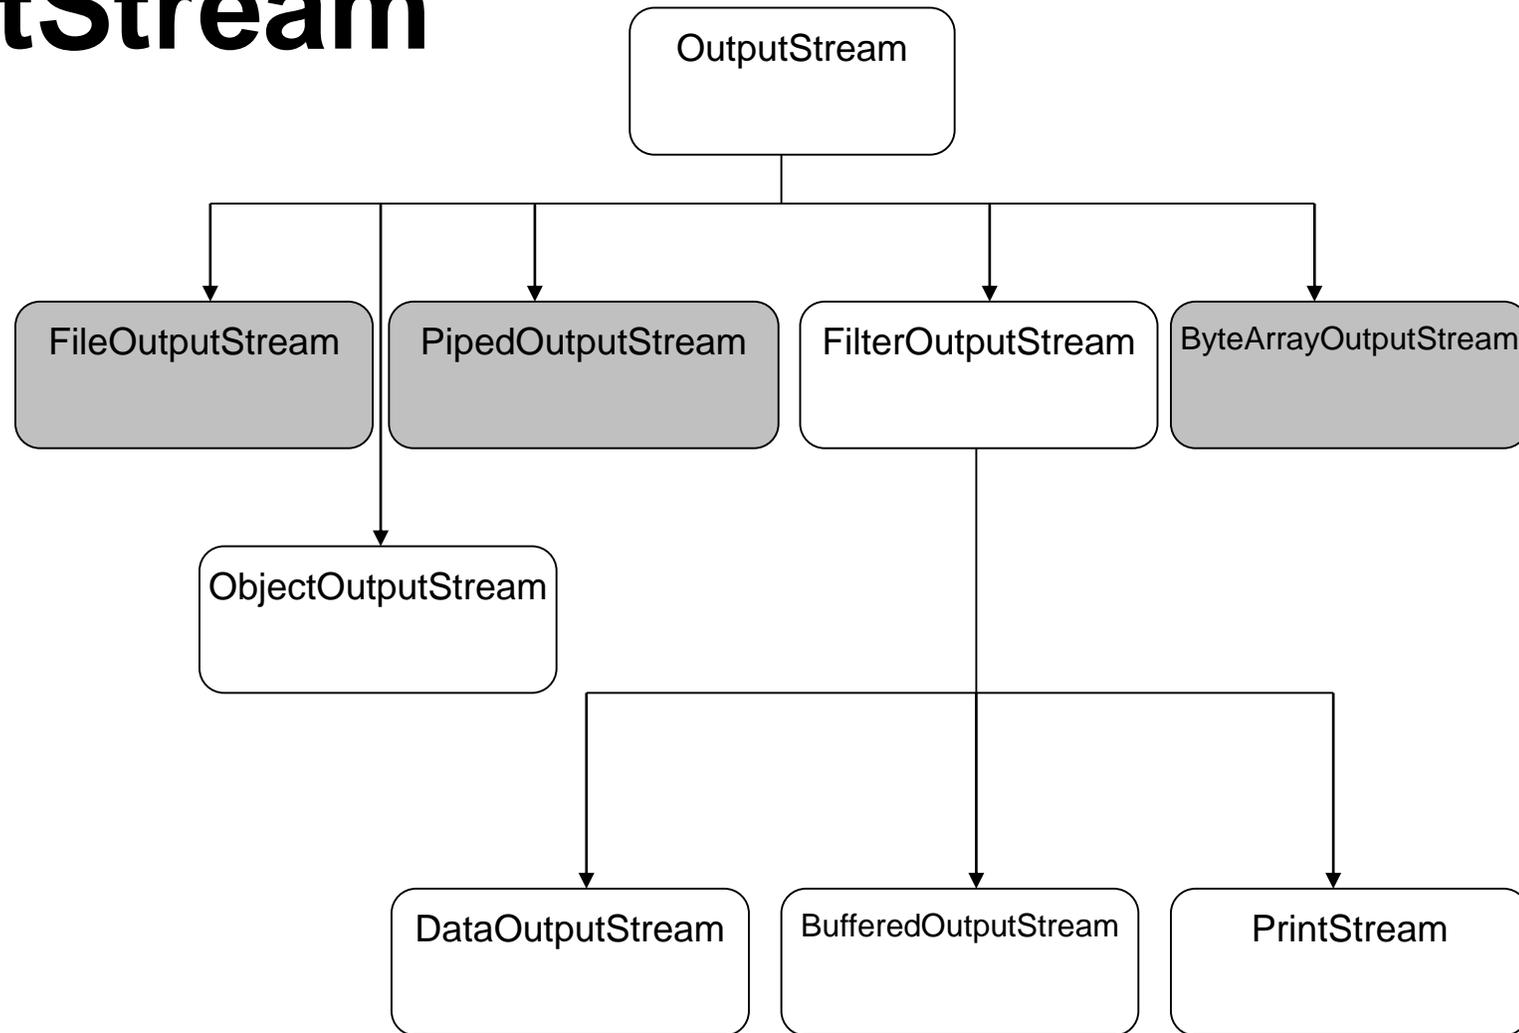

# java.io

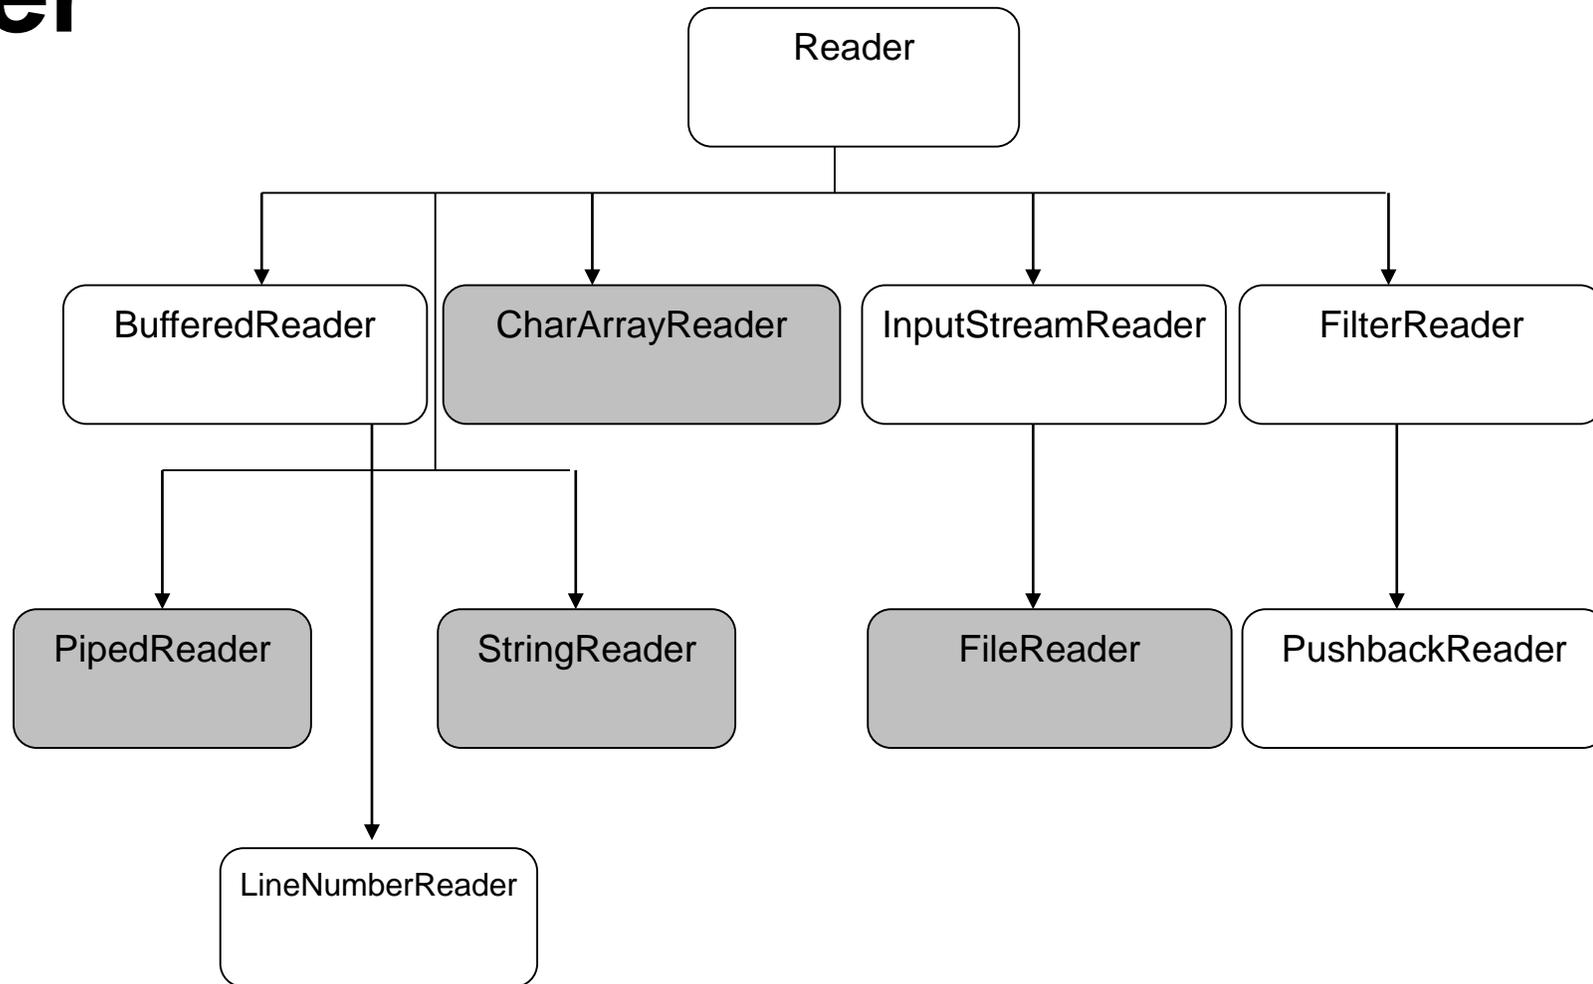

# InputStream

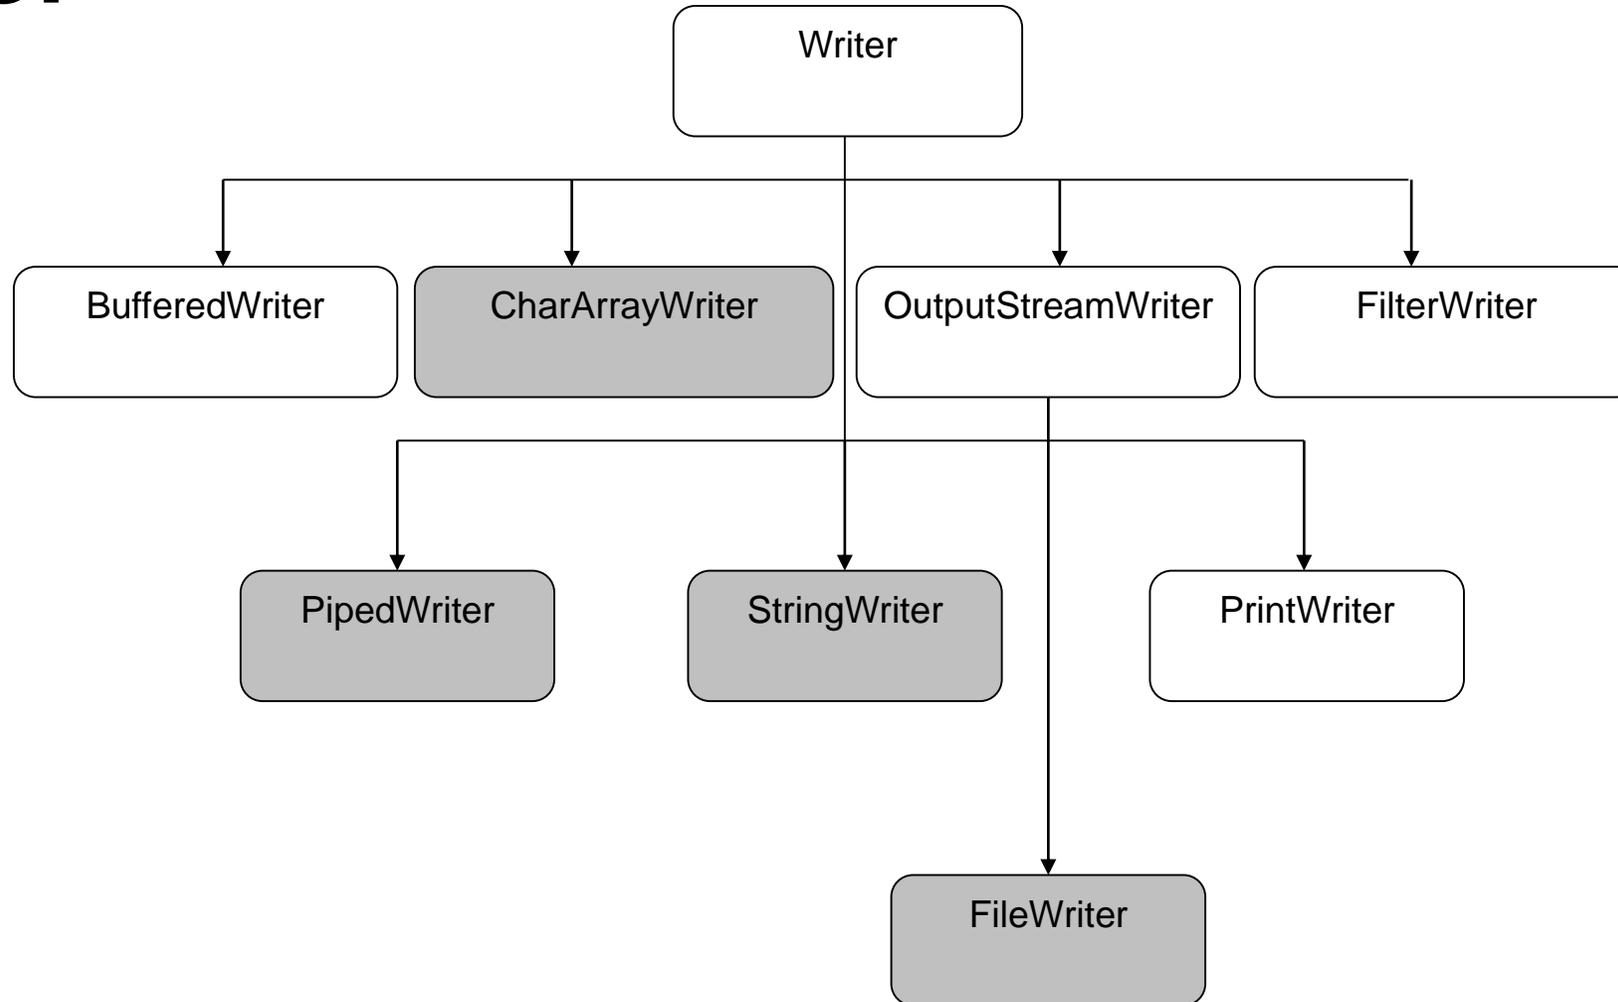

# OutputStream

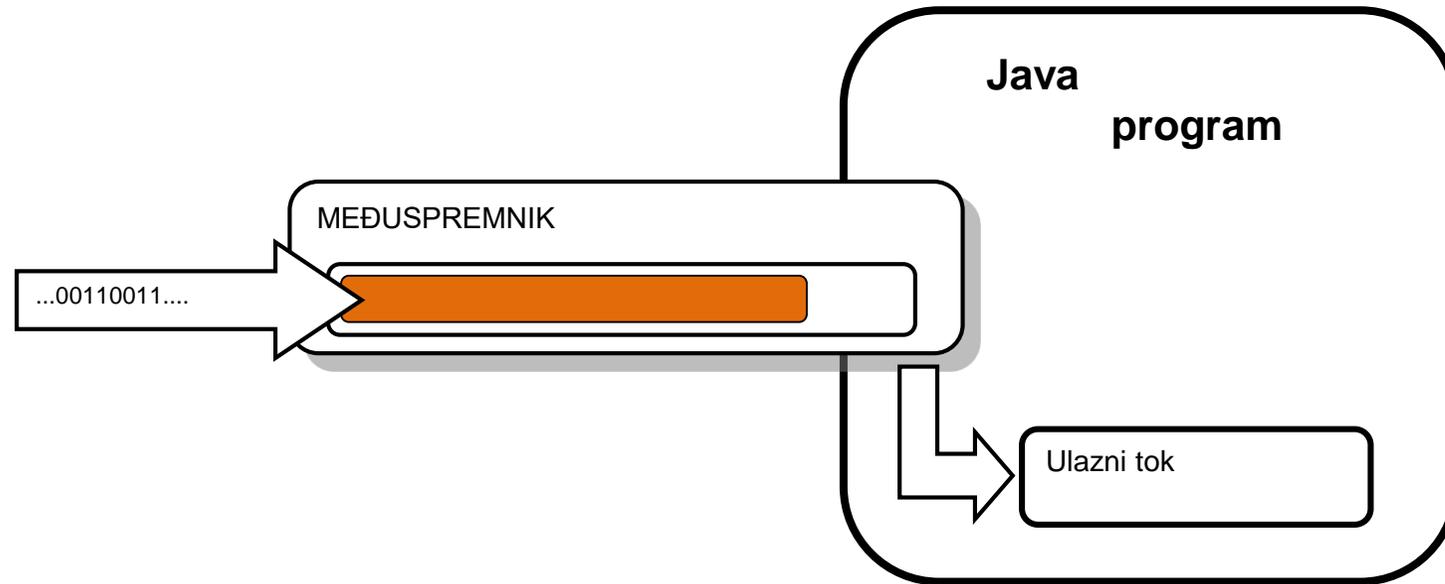

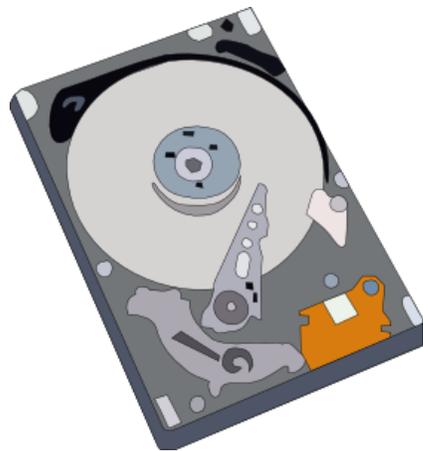

# Reader

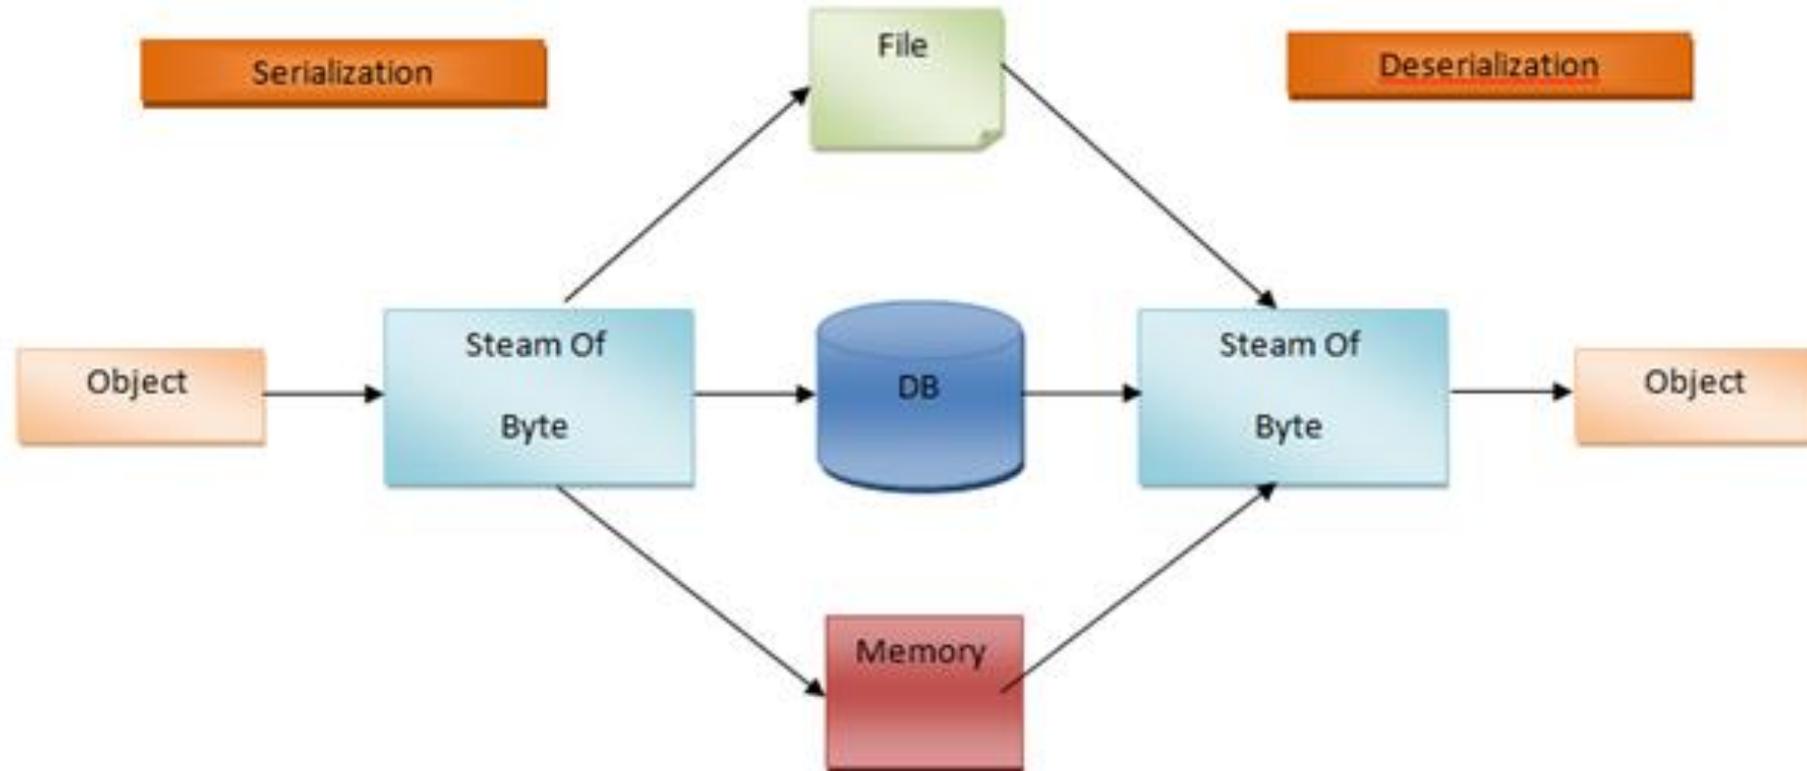

# Writer

# Buffers

# Serijalizacija i deserijalizacija

# java.nio

- *Path* – relativna ili apsolutna putanja do direktorija ili datoteke
  - laka konverzija iz *java.io.File* i *vice versa*
- *Paths* – statičke metode za dohvat *Path*-a
- *Files* – statičke metode za rad sa datotekama
  - *boolean* *exists(Path)*
  - *Path* *create(Path, FileAttribute)*
  - *List* *readAllLines(Path)*
  - *Stream* *lines(Path)*
  - *Path* *copy(Path, Path, ...CopyOption)*
  - *Stream* *list(Path)* – listanje datoteka
  - *Stream* *walk(Path)* – listanje datoteka i direktorija
  - *Path* *walkFileTree(Path, FileVisitor)* – visitor pattern (rekurzivni obilazak FileSystema)
